

Database Virtualization

Data Masking & Database Replication for accelerating and improving BI, Data Warehousing and Application Development Projects

July 13, 2016, 12pm - 2pm

This Lunch and Learn will focus on Data virtualization and replication and data masking. We will discuss how Analytics, ERP projects and all application development activities can be accelerated, simplified and improved, by empowering IT and business users with agile tools to accelerate and secure complex and data sensitive environments.

- **ACCELERATE** - the pace of development by providing developers and testers a secure and audited platform so they can refresh, bookmark, restore, rollback, synchronize, and archive databases when needed.
- **SIMPLIFY** - the management and deployment of databases by providing a platform for DBA's and System Administrators to manage all database instances and copies.
- **ENABLE** - both internal and external, and onshore and offshore resources to access real data without exposing them to confidential or personal information.

This session should be attended by any company looking to learn about easier and faster ways to meet compliance demands, make better data-driven decisions, and improve applications that run core business processes.

Session Information:

12:00 - 2:00pm

In Person: Lunch will be provided to attendees in Waltham, MA.
Seating is limited to the first 15 people that register.

Web: Details for conference call and web meeting will follow.
